## RF exposure exhibit

# **FCC RF Exposure Requirements**

### **General information:**

FCCID: TOXPS-3000

Modulation:

Device category: Mobile per Part 2.1091

Environment: General Population/Uncontrolled Exposure

Otherwise, compliance with the power density limits of 1.1310 is required.

#### **Antenna:**

The device has a portable antenna to be used for the purpose of reading tags

Configuration	Antenna p/n	Type	Max. Gain (dBi)
Indoor	None	Helical	0.5

### **Operating configuration and exposure conditions:**

The conducted output power is 0.416 W

#### **MPE Calculation:**

The minimum separation distance is calculated as follows:

$$E(V/m) = \frac{\sqrt{30 \times P \times G}}{d}$$
 Power density:  $P_d(mW/cm^2) = \frac{E^2}{3770}$ 

The limit for general population/uncontrolled exposure environment is **0.3m**W/cm2\* for a Channel Frequency: 457.5750 MHz

### **Conclusion:**

The device complies with the MPE requirements by providing a safe separation distance of 20 cm between the antenna, including any radiating structure, and any persons when normally operated.
